

## THE ABSTRACT OF THE DISCLOSURE

2 A method and device for printing a document. The method comprises the steps of:  
3 receiving electronic data which represents a document to be printed; converting the received  
4 electronic data into a format suitable for printing; authorizing user payment information; and  
5 printing a document on predetermined paper sheets upon receipt of a signal from the payment  
6 authorization unit. The device comprises a housing unit having an output bin which provides  
7 user access to the printed documents and an input bin for inputting predetermined types of  
8 paper to the printer unit. The device also comprises a transmitter and receiver for coupling the  
9 device to a network, and a touch screen for interfacing the user with the device in order to  
10 customize predetermined features of the document. The device further comprises a media  
11 device for inputting electronic document information from predetermined portable media  
12 device and a payment authorization device. The device further comprises a color printing unit  
13 for receiving the electronic document information from either the network transmitter or the  
14 input media device and based on the customized features of the document as set forth by the  
15 user and a signal from the credit card authorization device, converting the electronic  
16 document information into a paper copy.
